Storyteller Hiring Team

Re: AI Product Designer / AI Product Operations role

Dear Storyteller Hiring Team,

I am excited to apply for the AI Product Designer role. The part of the description that stood out most is the expectation to take an ambiguous product or operational problem, investigate it with AI and internal tools, build a useful first version, validate whether it works, and document it so the team can trust and reuse it. That is very close to how I already work.

My background combines AI-assisted product building with QA discipline. I have been building practical MVPs across Android, web, and browser extension workflows, including LearnLift AI, an Android AI study coach using Kotlin, Jetpack Compose, Supabase Edge Functions, JWT-based backend calls, and OpenAI-powered AI Coach features. I have also worked through the less glamorous but important parts of shipping: API quota errors, backend response parsing, AAB/versioning issues, Play Console closed testing, Chrome Web Store packaging, production/dev login behavior, user-flow testing, and release assets.

What I would bring to Storyteller is high agency and a product operations mindset. I am comfortable with imperfect briefs, debugging real behavior, tracing issues through tools and data, and deciding what is worth fixing first. My QA experience helps me avoid treating AI output as magic: I use AI for leverage, but I still inspect, test, challenge assumptions, and look for failure modes before calling something done.

I am also drawn to the client-facing and sports-tech context. Storyteller is solving a clear product problem for teams that need engaging, reliable Stories experiences across owned platforms. I would enjoy helping improve the workflows, checks, automations, and documentation that make delivery faster and product behavior easier to understand for both internal teams and clients.

Thank you for considering my application. I would welcome the chance to discuss how I think through ambiguous product problems, how I use AI responsibly in delivery work, and how I would approach the practical take-home task.

Sincerely,
Daniel Pancu
